SEISMIC DATA SERVICES

global expertise and personalized service

Seismic Data Management

Absolute Imaging offers a full suite of seismic data management solutions. Our experienced technicians understand the full seismic data cycle; whether it is newly acquired, purchased or old historical data. We can provide the manpower to wade through the stacks of tapes, paper and sections either in your office or in ours.

- **Seismic Data Management**
- **Seismic Data Security**
- **Data Transcription Services**
- **Seismic Data Recovery**
- **Seismic Data Sales Services**

Typically taking inventory and indexing is the first step in the seismic data cycle. This step is as important as the archiving work itself. An experienced technician will be able to identify missing data sets. Careful comparison of the data set and accompanying item inventory if provided will assure the success of any Indexing project.

Seismic Data Security

Absolute Imaging offers clients seismic data security through disaster recovery copy and Cloud upload services. Magnetic tape, documents, work station files and virtually any project data can be stored together as a data set on a wide variety of inexpensive and reliable archive media, or uploaded to your chosen Cloud storage provider. Data that was previously stored off-site or in file cabinets and map rooms can now be accessed quickly and efficiently. Quality control software ensures that transcribed data is checked and any problems are addressed as the data is secured. Recovery techniques can be applied and many problems with existing data due to age or mishandling can be repaired. We can also provide the secured data sets with near-on-line access and integrate them With existing data-management systems.

Data Transcription Services

Various data formats such as SEG-A, SEG-B, SEG-C, SEG-D, SEG-Y, SEG-2, Summit, and GEOCOR IV can be reproduced on cartridge, optical disk, CD/DVD, and disk pool in a non-proprietary format. Transcription services include:

- 9-track, 8mm, 4mm, 3480, 3490, 3490E, 3590, 3592, DLT, LTO, CD/DVD, USB Hard Drive, Optical WORM, 3 ½ floppy, 5 ¼ floppy.
- Seismic data can be demultiplexed or reformatted during the archive process, reducing further processing requirements.
- SEG-Y headers can be edited adding additional information such as shotpoint and survey coordinates for workstation loading.

Seismic Data Recovery

We can recover your data from media which have deteriorated or become damaged.

Seismic Data Sales Services

The final stop or the beginning of a new cycle depending on your point of view, Seismic Data Sales are an important source of revenue for many E&P companies. We offer a full suite of services for the Seismic Data Brokerage community. Brokers can depend on us for fast turnaround and accurate data sets. Services provided for the brokerage industry include:

- Data transcription
- Partialling
- Section scanning and striping
- Section creation from SEG-Y
- Scan basic data
- Single copies
- Mapping services
